Let your imagination wild

We have developed our know-how about linoleum and, in particular, WO's patented linoleum edging over many years. We have helped to create new products and application areas in collaboration with recognised designers and architects. The high-quality finish and aesthetic design solution of linoleum edging ensure a wide diversity of potential application areas. This means that ideas and innovation in the use of linoleum can now run wild.

Patented know-how

Architects and designers have for many years harboured a wish to be able to finish linoleum products in a harmonious way using linoleum on tops, undersides and edges. This led us to develop an innovative way of producing linoleum edging which is now patented internationally. In future, we would like to share this knowledge with our selected partners!

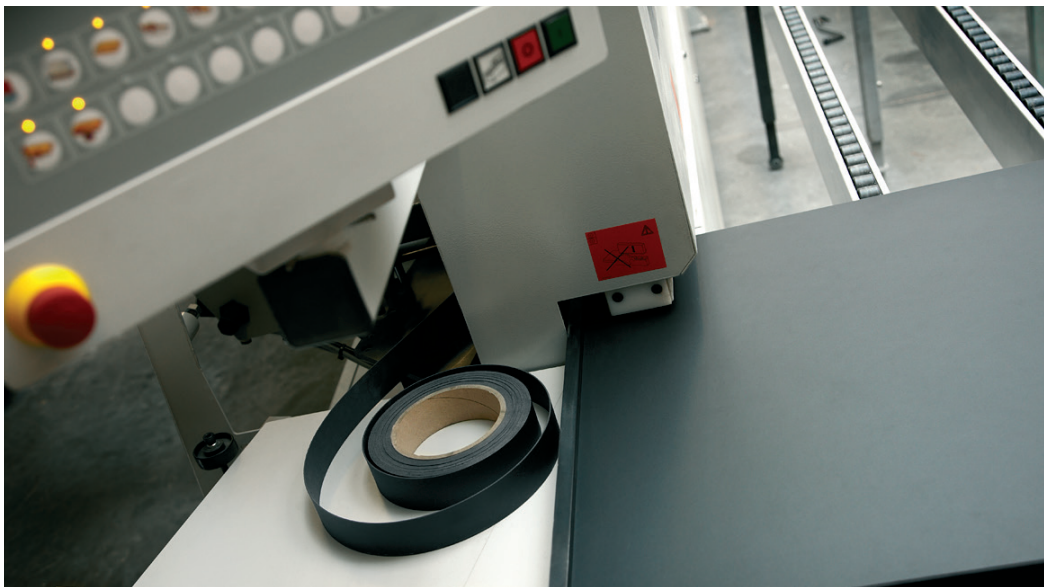

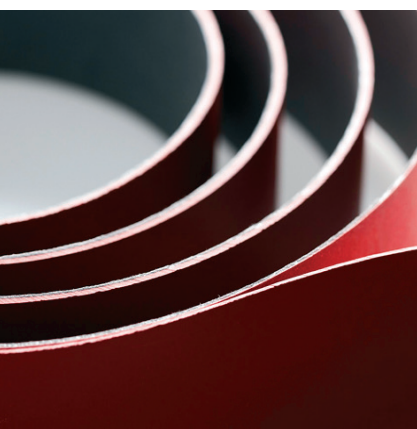

Linoleum edging

WO's linoleum edging can be used to achieve a harmonious and high-quality design finish which elevates any linoleum-covered material. The process can even be industrialised and this can often be done on existing machines! This means that our edging is a future-oriented solution which will be ground-breaking in the application of linoleum.

Naturally

Linoleum signals thoughtfulness and a sensible approach as it is made from nature's own materials. Linoleum also meets consumer expectations for sustainability in the products with which we surround ourselves. Linoleum makes common sense!
