

LINOLEUM
Maintenance
and facts

Linoleum, naturally

Linoleum is ideal for furniture or fittings thanks to its attractive, durable surface. What's more, it consists exclusively of natural materials. No chemicals at all. A carefully composed mixture of linseed oil, wood flour and resin with natural pigmentation added, makes our linoleum 100% biologically degradable.

Care and maintenance - to keep your linoleum looking great for years

Linoleum products from WO Interior require no form of treatment before use. We've done all that for you, along with strict quality control.

Day-to-day cleaning

- Clean with a damp cloth. A small amount of neutral detergent can be added.
- Remove spots immediately.

Regular cleaning

- Clean with a damp cloth
- Apply WO's premixed linoleum care product
- Allow to soak in for 1 minute
- Wipe off with a soft, well-wrung cloth.

Periodical cleaning/spot removal

- In the event of heavy soiling, apply a neutral cleaning agent correctly mixed to degrease the surface
- Rinse with clean water and leave to dry
- Apply WO's premixed linoleum care product
- Dry thoroughly with a soft, lint-free cloth.

For further protection of the linoleum surface, we recommend using table mats under flower pots, vases etc.

WO's premixed linoleum care product is a Monel mixture, specially-developed for cleaning and maintaining linoleum surfaces. It leaves a practical protective film on the surface.

The product is available in a practical spray bottle on our website at wo.dk
